What is Neural Style Transfer?

画风：神经网络风格转移

What are deep ConvNets Learning?

Cost Function

$$\text{Content } C + \text{Style } S \quad J(G) = \alpha J_{\text{content}}(C, G) + \beta J_{\text{style}}(S, G)$$

Generated image G

1. Initiate G randomly (G 为想要图片)

$$G: 100 \times 100 \times 3$$

2. Use GD to minimize $J(G)$

$$G := G - \frac{\alpha}{2G} J(G)$$

Content Cost Function

$$J_{\text{content}}(C, G) = \frac{1}{2} \|a^{[L]}(C) - a^{[L]}(G)\|^2$$

Style Cost Function

风格？

风格定义为不同激活通道之间的相关系数。

高度相关：纹理元素/颜色元素。

style matrix

Let $a_{i,j,k}^{[L]} = \text{activation at } (i, j, k)$

$G^{[L]}$ is $n_c^{[L]} \times n_c^{[L]}$ (k 和 k')

$$G_{kk'}^{[L](S)} = \sum_{i=1}^{n_H^{[L]}} \sum_{j=1}^{n_W^{[L]}} a_{ijk}^{[L](S)} a_{ijk'}^{[L](S)}$$

$$G_{kk'}^{[L](G)} = \sum_{i=1}^{n_H^{[L]}} \sum_{j=1}^{n_W^{[L]}} a_{ijk}^{[L](G)} a_{ijk'}^{[L](G)}$$

"gram matrix"

$$J_{\text{style}}(S, G) = \|G^{[L](S)} - G^{[L](G)}\|_F^2$$

$$J_{\text{style}}(S, G) = \sum_k \lambda^{[L]} J_{\text{style}}^{[L]}(S, G)$$

$$J(G) = \alpha J_{\text{content}}(C, G) + \beta J_{\text{style}}(S, G)$$

"使其尽可能小"

1D and 3D Generalization

What is Face Recognition?

Verification $1 \rightarrow 1$
Recognition $1 \rightarrow K$

One Shot Learning

看过一次脸能认出此人...

$\text{softmax } X \quad d(\text{img } 1, \text{img } 2) = \text{degree of difference}$

If $d(\text{img } 1, \text{img } 2) \leq \tau$

Siamese Network

$$d(X^{(1)}, X^{(2)}) = \|f(X^{(1)}) - f(X^{(2)})\|_2^2$$

Triplet Loss

$$\text{Want: } \|f(A) - f(P)\|^2 \leq \|f(A) - f(N)\|^2$$

$d(A, P) \quad d(A, N)$

$$\|f(A) - f(P)\|^2 - \|f(A) - f(N)\|^2 \leq 0$$

$$\text{修改: } \|f(A) - f(P)\|^2 - \|f(A) - f(N)\|^2 + \alpha \leq 0$$

$$J = \sum_{i=1}^m h(A^{(i)}, P^{(i)}, N^{(i)})$$

$$\hat{y} = \sigma \left(\sum_{k=1}^{128} w_k |f(x^{(1)})_k - f(x^{(2)})_k| + b \right)$$
